GERMINATION INSTRUCTIONS

80% GERMINATION GUARANTEE:

Our featured Seed Breeders are covered by an 80% Germination Guarantee. Seeds are hand-picked, inspected and tested frequently to ensure success.

GERMINATION METHOD:

Follow our tested Germination Method precisely to get started on growing your best yield, ever.

WE HAVE A SEED FOR EVERYONE!

With a choice of auto-flowering, feminized, regular, dwarf and high CBD seeds in over 100 different strains, we have the seeds to grow exactly the right plant for you! Available in Sativa, Indica and Hybrid.

24/7 CUSTOMER SUPPORT!

We are here for you 24/7, 365 days a year. If you have any questions or concerns, call us at 1 (800) 805-7835 or chat with us online: RocketSeeds.com

ROCKET SEEDS

⚠ USE BOTTLED SPRING WATER ONLY ⚠

1 Put your seeds into a glass of room-temp bottled spring water.

2 Set a timer and let the seeds soak for 14 to 18 hours. **DO NOT** soak them beyond this time, it will drown your seeds.

Note: Seeds do not have to sink. Move onto the next step even if they have not cracked.

2 Put 2 pieces of thick paper towel on top of each other onto a ceramic dinner plate.

3 Pour the glass of seeds and water onto the paper towel. Make 2 folds on either side of the paper towel (like a burrito) to cover the seeds.

Pour off any excess water. Do not cover with a plate or use a zip lock bag.

Make sure the seeds are able to feel oxygen, warmth & moisture at the same time.

4 Place in a warm, dark and open room. Let sit until they open. Ensure the paper towel stays moist by adding water periodically. Do not drown the seeds!

DO NOT put into a cupboard, drawer or any other small enclosed area, as they will have difficulty opening. The seeds will still need oxygen to be successful.

5 Seeds will begin to crack open and a taproot will develop. Allow the taproot to grow 1/2 to 3/4 of an inch before transplanting into plain potting soil.

*Each strain will take from 2 to 7 days to crack open.

Storing: Seeds can be stored in a sealed glass jar for up to 2 years. Store the jar in a dark, cool place (a basement or garage). Keep at 5 to 7 degrees Celsius.

80% GERMINATION GUARANTEE

We sell and test thousands of seeds per month. By testing this high number of seeds, it ensures we only ship viable seeds with germination rates of 80% or higher.

MARIJUANA SEEDS NEED 3 FACTORS FOR SUCCESSFUL GERMINATION:

MOISTURE WARMTH DARKNESS

Never let the paper towels dry out, but never drown the seeds. Depending on the humidity, the paper towel may need re-moistening every 6 hours (your experience may vary). Check your seeds often, as each seed has a different clock that is triggered by hitting the exact point of moisture, heat and oxygen level.

WHAT'S NEXT?

When you have a taproot of 1/2 inch (2 cm), you are ready to plant your seedling into your next medium (soil). Ensure you are using **plain potting soil** with no nutrients or fertilizers for the first 3 weeks as your seedlings are very fragile.

Plant your seedling taproot down, approximately a finger-tip in length and cover the seedling. Put a light source or natural light above the soil and add minimal water. Wait until the seedling breaks through the soil on its own.

GUARANTEE WILL NOT BE HONORED IF:

- A. You planted the seeds directly into soil.
- B. You used a seed starter kit, rock wool, peat pellets or any other germination device for vegetable seeds.
- C. You did not germinate using the 'cup of water transfer to moist paper towel' method described.
